June 3rd, 2020 - publisher summary nanoparticles are defined as materials whose particle sizes are in the range of 1 100 nm one of the major changes in the properties of nanoparticles is the significant increase in the number of atoms molecules on the surface of particles and hence availability of effectively high surface area pared with bulk material'

'ferroelectric materials for microwave tunable applications

May 4th, 2020 - a review of the properties of ferroelectric materials that are relevant to microwave tunable devices is presented we discuss the theory of dielectric response of tunable bulk materials and thin films the experimental results from the literature and from own work are reviewed the correspondence between the theoretical results and the measured properties of tunable materials is critically"book fundamentals of electroceramics materials devices and

May 28th, 2020 - description the first textbook to provide in depth treatment of electroceramics with emphasis on applications in microelectronics magneto electronics spintronics energy storage and harvesting sensors and detectors magnetics and in electro optics and acousto opticelectroceramics is a class of ceramic materials used primarily for their electrical properties"electroceramics materials properties applications
